

Video Coding

Seminar 4 SS 2019

M.Sc. Oleg Golokolenko
(oleg.golokolenko@tu-ilmenau.de)
Kirchhoffbau, K3013

Homework assignment

- To further increase the compression ratio, we now apply motion estimation using fast *fftconvolve* (intermediate step) and display the found motion vectors in the video, with small lines or arrows.
- **There should not be motion vectors on the static parts of the frame!!**

Note: to simplify processing complexity use only part of the frame:

- cut small frame in the middle of RGB frame (1/2)
